About Me

Computer Science student at Paragon International University, focused on backend development with Laravel. Hands-on experience across full-stack projects, database design, and UX/UI.

Projects

BookLan – Intercity Bus Booking App 2026

Figma Prototype

BookLan is a mobile app prototype that lets travelers book a seat on a passing bus or van from anywhere on the road. 1st Place, MIS Challenge 2026.

LanKrong – Urban Bus Navigation App 2026

Figma Prototype

A mobile app prototype that lets Phnom Penh commuters pin their location, get matched to the right bus, and follow step-by-step guidance to their destination.

Parking Management System 2026

Laravel · PHP · MySQL

A full-stack parking management system built with Laravel, handling vehicle check-in and check-out, slot assignment by zone, staff management, automated fee calculation, booking history, and revenue report.

High School Management System 2026

Laravel · PHP · MySQL

A full-stack school management system built with Laravel for public high schools still relying on paper-based grading and student records, supporting three user roles including admin, teacher, and student, with Khmer language data and availability-based class scheduling.
